Save time and money on your data cleaning process.

Connect multiple data sources into one insightful database with Unite Data.
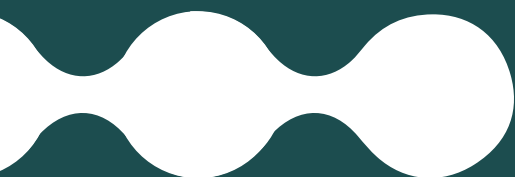

ABOUT UNITE DATA

"40% of companies* struggle with data quality"

Posing challenges to technological advancement and the implementation of A.I. projects. This struggle stems from incomplete data, outdated information, duplicates, or multiple versions of 'the truth'.

Enter Unite Data

Your solution to Unite Data sets by identifying connections across various (master) data sets.

- **Reduce manual labour of data cleaning**
- **Save time & automate recurring tasks**
- **Track changes for documentation**
- **Reduce errors**

Unite Data is built using smart algorithms designed to seamlessly connect data elements, paving the way for a more integrated and intelligent data ecosystem.

* A.I. barometer - VLAIO (May 2023)

EFFICIENCY

Unite Data is made for efficiency gains across the board

Data cleaning at your service:

A user-friendly web application for data stewards

A comprehensive code base for data engineers

Used by CROPLAND consultants in data projects

Unite Data is engineered not just for efficiency but to accommodate different users, ensuring that every stakeholder can leverage clean data for their specific needs.

- **IT consultants**

    who implement CRM, ERP, HRMS, MDM, PIM, ... systems rely on clean data and use Unite Data to reduce project delivery times.

- **Marketeers**

    use Unite Data to deliver high quality information about customers and/or prospects.

- **Operational excellence managers**

   use Unite Data to deliver efficiency gains and to render organizations datafied.

Unite Data stands as a multifunctional software designed to grant every user easy access, making data cleaning a seamless part of your workflow.
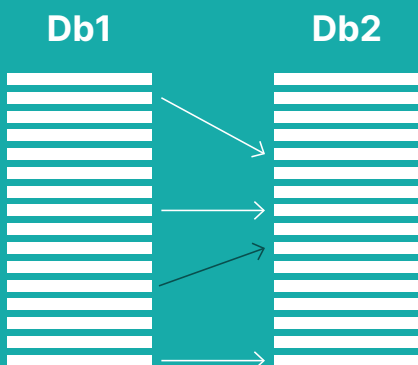

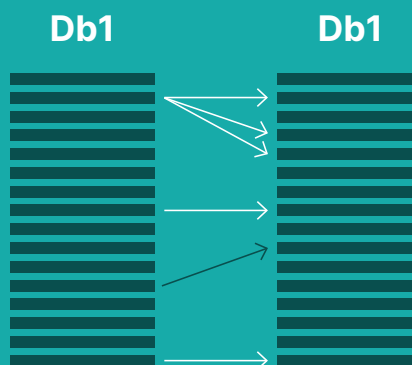

Method

Unite Data discovers connections across disparate master data sets by using fuzzy matching. This A.I.-driven software intelligently analyses similarities, scoring each match to ensure a nuanced, accurate link between data elements.

A.I. Solutions	A.I. Solutions BV	La Baguette	La Baguette
Veldstraat	Veldstr.	Veldstraat	Meir
5	5	5	5
2600	2000	2600	2000
	✓	?	✗

Fuzzy matching will be used for inter- and intra-database lookup.

Db1	Db2		Db1	Db1

Inter-database lookup: seamlessly linking different databases, creating a unified view of your information.
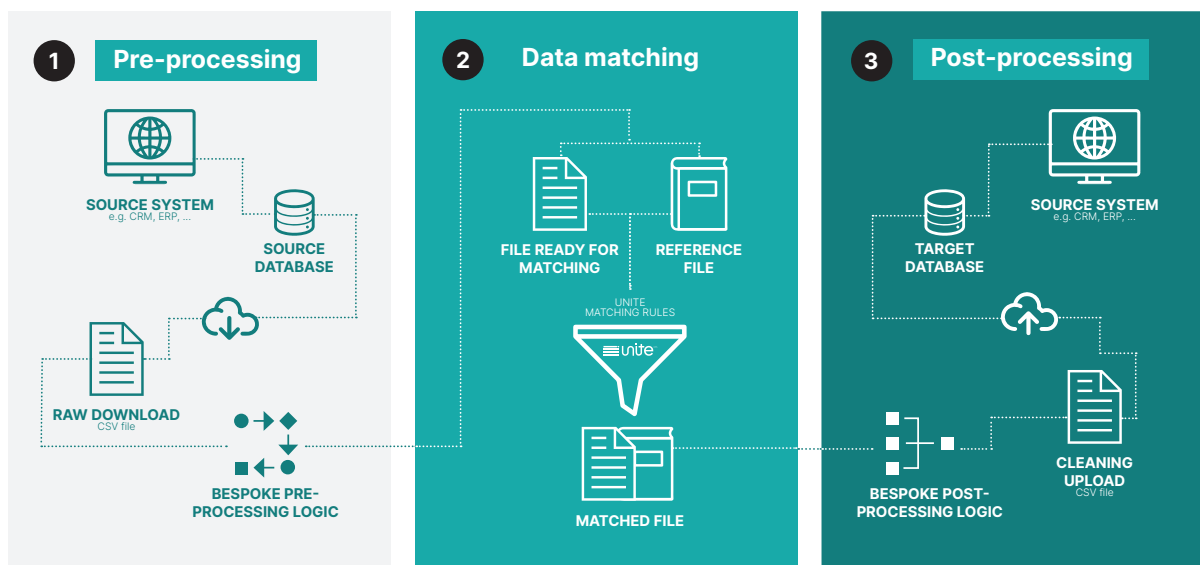

Intra-database lookup: using deduplication to ensure that each piece of data is unique and used optimally.

HOW IT WORKS

Unite Data in the middle of a data cleansing pipeline

In the middle of your data cleansing pipeline, Unite Data transforms complexity into clarity.

Would you like to view this at full size? Then take a look at our website: **unite-data.be.**

It starts with the **raw data sources**, processed, matched, and refined through our intelligent software. Then, it smoothly transitions to the desired **Target**, now enriched and ready to empower informed decisions.
